

Sepia tones, example of applying to a photograph

How to Apply a Sepia Tone to a Photo in Corel Photo-Paint

A sepia tone is a reddish brown monochrome tint. When applied to a photo, it gives the picture a warm, antique feeling. It's easy to do in Photo-Paint!

Here's How:

Open the image in Photo-Paint.
If the image is in color, go to Image > Adjust > Desaturate and skip to step 4.
If the image is in grayscale go to Image > Adjust > RGB Color.
Go to Image > Adjust > Color Hue.
Click on the color wheel at 35.
Click on More Tinted colors.
Click on More Red tones.
Click OK.

Tip:

Experiment in the Color Hue dialog to apply other color tints to your photos.
